TWT & associated companies provide engineering services dealing with waste treatment

TWT & Co. have staff who are professionals coming from the engineering offices and enterprises in Poznan, matched to the specific tasks associated with both the design and implementation of the investment regardless of the location in Poland.

We provide services to a wide audience, min. for industrial plants, local governments and private investors.

We have a staff of employees with high qualifications and rich experience gained during the often large investments, often with a high degree of complexity.

The assumed investment process, "TWT & Co acts as:

Designer or contractor of investments (General Contractor - Sub Contractor.)

The scope of our services is very broad and includes mainly:

- Preparation of a comprehensive multi-branch design documentation.
- Develop and prepare grant applications for industrial and municipal investment
- The development of tender documents by FIDIC procedures
- Develop documentation and execution of the project by procedures in accordance with the Law on Public Procurement
- Development Reports impacts on the natural environment
- Develop the technological concept for various industries
- Development of technological and industrial projects for both construction permits and implementing projects
- Provide supervision for the investments
- Prepare proposals for a decision on building and land together with the implementation of operations for obtaining the required document from the Office
- We execute and design the documentation for obtaining Building Permits
- We prepare documentation for obtaining licenses, permits, decisions

Administrative:

- The exhaust of gas or dust into the air
- On the generation, collection, transportation and disposal of waste
- To emit noise in the environment
- On the introduction of sewage into the water or land including rainwater and snowmelt

Note: searching for technical solutions to protect the environment, we provide individual solutions to a wide range of design and realization:

- We design and implement sewage treatment plants and industrial and sanitary sewer, stormwater and water supply
- We design and implement sorting facilities for municipal and industrial waste
- We realize the production of biogas in the proposed wastewater treatment plants and municipal landfills
- We design systems for alternative fuels (RDF) and the fuels derived from straw, wood chips and cereals, etc.

In the course of many years of experience we have designed and realized many projects associated with the subjects mentioned above. For example: betting land development projects including infrastructure, buildings, administration, storage facilities, boilers, compressors, laboratories and other related comprehensive implementation of the investments.

TWT & Co., for the purpose of conducting a task, employs designers/engineers from following industries:

- Architectural - Structural
- Technology
- Professional installation (water and sewage, CO, ventilation and gas)
- Electrical and instrumentation
- Health and safety experts, fire protection

This is a team of specialists with high professional qualifications, with a rich and extensive experience particularly in the design and supervision of industrial investments and environmental protection.
