

Your partner in

Waste Treatment
Waste-to-Energy

*Complete solutions
for an efficient waste-to-energy
with a minimum impact on the environment
using innovative technologies*

We offer **consulting** in waste treatment technologies by investigating and analyzing all the possibilities, suppliers and legal regulations. Besides we offer **engineering services** dealing with waste treatment.

Total Waste Treatment is the partner you need, to find your solution involving turn-key 'waste-to-energy'.

Therefore we can help you to find solutions that are:

- **Complete**
- **Innovative**
- **Efficient**
- **Profitable**
- **Sustainable**
- **Environment friendly**

Types of waste

We can offer help to find solutions for **most types of waste**:

- MSW (Municipal Solid Waste)
- Bio-degradable waste
- Medical waste
- Industrial waste
- Toxic waste
- Waste water
- Sludge
- Tyres
- Electronic waste

Quantity

We offer solutions for any amount of waste, from small quantities up to verly large quantities (>200 000 t/y).

About the company

Total Waste Treatment is a Trademark of 'Reflex Sp z o.o.'

We have researched the waste treatment technologies market in Europe for several years and gained a clear vision on the possibilities and opportunities within waste treatment.

We offer consulting and corresponding services to assist private or public institutions in their search for a suitable and innovative waste treatment solution.

We always pursue to assist in technologies which are environment friendly (e.g. minimum emissions and reduction of the carbon footprint).

Our method

We analyse the most European suppliers and several other suppliers outside Europe, which are considered to have the highest standards in economical and ecological values.

We study carefully the local laws and the needs of our customers, to make sure they are conform. This information can be given to the suppliers, therefore the offered technologies are in line with the customer's wishes and the local requirements.

We make sure that plants will be '**turn-key**'. This means the plant is ready to operate, without unforeseen costs for the customer.

We make sure that possible problems and situations, which often occur when working together with an unknown supplier are lowered to the minimum, concerning unexpected costs, communication, transport, delivery times, etc.

Our advantage is that we do not stay limited to one technology, so we don't try to impose one solution to our potential customers. We want to discuss what is the best possible solution and technology.

The result of knowledge about several technologies is that we can offer solutions for most types of waste and for almost any quantity, going from small local quantities up to very high metropole quantities (> 200 000 t/y).

Further we also try to look always one step ahead in new legal **regulations** and **developments** involving waste treatment solutions. Therefore we can almost insure that our customers plants can operate for many years without having to make modifications to meet new regulations. (e.g. emissions)
